Hello, Garvita Sakhrani

The diagram illustrates the MVC (Model-View-Controller) architecture. It shows the following components and their interactions:

- Client:** Represented by a computer icon. It sends requests to the Controller and receives responses from the View.
- Controller:** A central component that receives input from the Client and interacts with the Model and View. It is associated with a "Servlet/Servlet Filter" cloud.
- Model:** Represents the data and business logic. It interacts with the Controller and the Database. It is associated with a "Java class" cloud.
- View:** Represents the user interface. It receives data from the Controller and sends it back to the Client. It is associated with an "JSP Page" cloud.
- Database:** A storage component that interacts with the Model.

Interactions:

- The Client sends a request to the Controller.
- The Controller interacts with the Model and the View.
- The Model interacts with the Database.
- The View sends data back to the Client.

Annotations:

- "Takes user input (request parameters)."
- "Interacts with model and view."
- "Interacts with database."
- "Executes business logic."
- "What user sees on the screen."
- "Generates UI for the user."
